

Greeting Bear Lakers,

Recently we sent you a message regarding the placement of beaver traps on bear creek. As you may recall these traps were set to alleviate the problem of the beavers damming up the creek, thereby possibly negatively affecting the lake level. This message is to inform you that one beaver has been eliminated and the traps have been removed. Hopefully this issue has been resolved. It is now safe to travel up the creek (but don't forget your paddle)

Sincerely,

Bear Lake Protection and Rehabilitation District Board.
